

# Burndown

## Burndown Chart

Compared to last sprint, our burndown chart looks a little better, more work was started a little earlier leading to a less steep drop compared to last sprint. However, that does not mean the drop is not steep this sprint. This signals that still all the work is being done at the end, when it should be more spread out. Nevertheless, it is still an improvement from last sprint.

## Velocity

The velocity of the sprint stayed around the same, it just increased slightly. We took around the same load of tickets as last sprint, but our increased familiarity with the tech stack and code allowed us to do a little more than last sprint.
